

Website Developer Brief

Project Controls, Planning & Claims Support Website

Build-ready specification for a boutique construction advisory website targeting Australian civil, infrastructure, rail, utilities and building contractors.

Core positioning

Project Controls, Planning & Claims Support for Australian Contractors

Tagline: Protect your programme. Protect your entitlement. Protect your profit.

Prepared for: Taarish Punwani and Vikum Perera
Prepared for: Website designer / developer
Version: 1.0

Table of Contents

- 1. Website goal and success criteria
- 2. Research-led design principles
- 3. Brand direction: colours, typography and imagery
- 4. Site map and global components
- 5. Page-by-page build specification
- 6. Visual mockups for each page
- 7. SEO, accessibility and performance checklist
- 8. Content copy deck
- 9. Asset checklist and final handoff list
- 10. Research references

1. Website goal and success criteria

The website has one job: make a contractor, commercial manager, project director or Australian industry partner think: "These people understand our project problems. We should speak to them."

The site should not try to look like a 500-person global consultancy. It should feel like a small, senior, specialist team that helps contractors protect time, entitlement, claims and profit.

5-second clarity	Homepage hero must immediately say who we help and what we do.	Busy construction decision-makers will not decode vague positioning.
Pain-led messaging	Lead with programme risk, EOT exposure, weak records and LD risk before listing services.	Contractors buy because of pain and risk, not because they want generic planning services.
Trust signals	Founder profiles, credentials, sectors, capability statement, practical outputs.	The business is early-stage, so founder credibility must carry trust.
Conversion	Every key page needs Book Intro Call and Download Capability Statement.	The goal is enquiry, not just browsing.
Mobile-first	The site must work cleanly on LinkedIn mobile clicks.	Many prospects will open from LinkedIn on mobile.
Accessible design	Strong contrast, readable font sizes and clear forms.	Professional B2B sites must feel easy and trustworthy.

2. Research-led design principles

The design direction combines specialist construction-claims positioning with clean consulting credibility. The closest strategic reference is Accura Consulting because it is specialist and claims/delay focused. Rimkus is useful for service grouping and expert-led credibility, but it is too broad and corporate to copy directly. Linesight is useful for clean consulting structure and sector/service navigation. HKA is useful for the language around claims, disputes, delay and risk.

Accura Consulting	Clear focus on forensic QS, delay analysis, claims consulting, planning/programming and commercial/contract management.	Use a specialist claims and planning positioning instead of generic admin language.
Rimkus	Clear service groups and project controls language linked to delay, cost overrun, conflict and disputes.	Use simple navigation and expert-led service pages, but avoid pretending to be a global giant.
HKA	Frames claims/disputes as serious risks that delay delivery, increase costs and strain relationships.	Use risk and entitlement language: cause-effect, critical path, substantiation, LD exposure.
Linesight	Clean consultancy navigation across services, sectors, projects, insights and contact.	Use clean page structure, whitespace and professional consulting cues.
NN/g UX principles	Trustworthiness is built through design quality, transparency, content depth and clear connection points.	Use professional design, current content, founder visibility and easy contact actions.
WebAIM / WCAG	Normal text contrast should meet at least 4.5:1; large text 3:1.	Use navy/white and charcoal/white combinations. Avoid pale grey body text.

Important positioning decision

Do not lead with "Planning and Contract Administration Services". Lead with "Project Controls, Planning & Claims Support". Planning can sound like overhead. Claims, entitlement and commercial outcomes sound like profit protection.

3. Brand direction: colours, typography and imagery

Target brand feel: professional, technical, contractor-focused, commercial and calm. Avoid flashy startup styling. Avoid generic corporate stock. The site should feel like a boutique advisory firm that understands site reality, contracts, delays, programmes and commercial pressure.

Primary	Deep navy	#0B1F33	Trust, engineering, consultancy credibility.
Secondary	Charcoal	#2E343B	Professional neutral for headings and footer.
Background	Warm white	#F7F8FA	Cleaner than pure white and easier on long pages.
Section	Light steel blue/grey	#E8EEF3	Subtle engineering feel and section separation.
Accent	Construction amber	#D99A2B	Construction/commercial energy without looking like a builder logo.
Text	Near black	#151A1F	Readability and authority.

Typography: Headings: Inter, Manrope or Sora. Body: Inter, Source Sans 3 or Open Sans. Recommended body size is 17-18px with 1.5-1.7 line height. Use clear, large headlines; do not use tiny consulting-style text.

Image style: road construction, rail works, site teams in PPE, infrastructure corridors, bridge works, programme/Gantt visuals, Power BI style dashboards, project meetings. Avoid handshakes, generic office photos, skyscrapers, overly polished corporate stock and AI-looking construction images.

Icon style: thin-line icons only. Suggested icon themes: programme, clock/time, shield/protection, chart/reporting, document/claim, contract, warning/risk, infrastructure.

4. Site map and global components

Recommended navigation: Home, Services, Contractor Problems, Industries, About, Insights, Contact. Use a clear primary button in the header: Book an Intro Call. Use a secondary CTA across the site: Download Capability Statement.

Header	White header, sticky on desktop, navy logo area, simple nav, amber or navy CTA button. On mobile: logo + hamburger + clear CTA after menu opens.
Footer	Navy footer with company description, service links, industry links, email, LinkedIn and Book a Call.
CTA buttons	Primary: navy or amber filled button. Secondary: white button with navy border. Labels: Book an Intro Call, Download Capability Statement, Speak to a Specialist, Send Enquiry.
Capability statement download	Use a simple form or direct download. If email capture is used, state: "Enter your email to receive the capability statement. We will not add you to a mailing list without permission."
Contact forms	Keep form fields practical: name, company, role, email, phone, project location, project type, support needed, message.
Responsive behaviour	Cards stack into single column on mobile. Keep buttons full-width on mobile. Avoid tiny text and complex animations.

5. Page-by-page build specification

The following pages should be built in this order. Each page includes purpose, layout, exact content, calls-to-action and why it matters.

Page 1 - Home

Purpose: Explain who we help, what problem we solve and why someone should book a call.

Hero	Headline: Project Controls, Planning & Claims Support for Australian Contractors. Subheading: We help civil, infrastructure and construction contractors maintain stronger programmes, track delays, protect EOT entitlement and improve commercial outcomes - without the cost of a full-time planner or claims team. Buttons: Book a 20-Minute Intro Call; Download Capability Statement.	This states the market, services and outcome in one screen.
Pain statement	Heading: When project records are weak, contractors lose leverage. Add 3 cards: Delayed but cannot prove why; EOT exposure; No full-time planner.	Makes the contractor feel understood before being sold services.
How we help	4 cards: Planning & Programming; Delay Analysis & EOT; Project Controls & Reporting; Commercial & Contract Administration.	Allows quick service recognition.
Why contractors engage us	4 outcome blocks: Protect entitlement; Reduce LD risk; Improve reporting; Flexible senior support.	Focuses on value and risk reduction.
Founder credibility	Two profile cards for Taarish and Vikum with photos if available.	Early-stage trust comes from the people behind the business.
Industries	Icon grid: Roads & Highways, Rail, Utilities, Airports, Marine, Buildings, Water, Recovery Works.	Shows relevance to contractors.
Final CTA	Heading: Have a programme, delay or commercial issue? Buttons: Book an Intro Call; Download Capability Statement.	Turn interest into enquiry.

Page 2 - Services

Purpose: Turn broad interest into specific service understanding. The page should look detailed enough to be credible but not so long that it feels like a legal document.

Planning & Programming	Primavera P6 programming; MS Project scheduling; baseline programme development; construction sequencing; resource-loaded programmes; programme updates; recovery programmes; critical path reviews; lookahead planning.	Stylised Gantt/programme visual.
Delay Analysis & EOT Support	Delay event tracking; delay registers; cause-effect analysis; critical path impact reviews; time impact assessments; EOT claim support; prolongation support; supporting documentation.	Delay timeline / critical path diagram.
Project Controls & Reporting	Forecasting; cost tracking; budget monitoring; S-curves; progress measurement; earned value reporting; KPI dashboards; executive reporting; Power BI reporting.	Dashboard mock-up.
Commercial & Contract Administration	Variations tracking; correspondence tracking; contract notice support; site record management; commercial registers; monthly reporting; claim support documentation.	Register/document control visual.

Page 3 - Contractor Problems

Purpose: This is likely the highest-converting page. Contractors should recognise their situation and feel the urgency to speak before the issue becomes a dispute.

We are delayed but cannot prove why.	Delay events are discussed on site but never properly recorded or linked back to programme impact.	Delay registers, event tracking, programme updates and critical path reviews.
Our EOT claim needs stronger support.	The claim exists, but records, programme analysis and cause-effect narrative are weak.	EOT support, delay analysis, chronology, supporting documentation and impact assessment.
Our programme is out of date.	The baseline programme no longer reflects delivery and recovery actions are unclear.	Programme updates, recovery programmes, lookahead planning and critical path analysis.
We do not have a full-time planner.	Project teams rely on PMs, CAs or site managers to update programmes while delivering the work.	Flexible remote planning support without permanent overhead.
We are exposed to liquidated damages.	Delays are not linked to excusable events, creating risk at the end of the project.	Delay event tracking, EOT support, programme evidence and contemporaneous records.
Our reporting is not good enough.	Clients and internal leadership want clearer reporting than the project team can produce.	Progress dashboards, executive reports, S-curves, KPIs and monthly reporting.

Page 4 - Industries

Purpose: Show relevance across the contractor market and improve SEO for sector-specific searches.

Roads & Highways	Planning, progress reporting, delay tracking, recovery programmes and EOT support for road and highway projects.
Rail	Programme controls, possession planning support, progress reporting, delay analysis and claims support.
Utilities	Support for water, power, gas, communications and utility interface works where delays and access constraints are common.
Airports	Programme and commercial support for staged works, access constraints, operational interfaces and stakeholder reporting.
Marine	Planning, commercial and delay support for marine infrastructure, ports and waterfront works.
Buildings	Planning, sequencing, contract administration and commercial support for building contractors and subcontractors.
Recovery Works	Fast-moving project controls and commercial support for emergency, resilience and recovery programmes.

Page 5 - About

Position the team as boutique, practical, evidence-based and commercially focused. Include headshots if available; otherwise use clean placeholders until ready.

Taarish Punwani	Project Controls & Commercial Specialist. Include infrastructure project controls, forecasting and cost control, governance and executive reporting, JV reporting, Power BI dashboards, commercial management and transport infrastructure experience.
Vikum Perera	Project Controls, Commercial & Quantity Surveying Specialist. Include 10+ years international experience, Primavera P6, critical path analysis, delay analysis, EOT and claims, QS, contract administration, and transport/rail/marine/airport/utilities/building sectors.

Page 6 - Insights

Purpose: Make the website feel credible and active. These posts also become LinkedIn material and follow-up content for prospects.

Why Contractors Lose EOT Claims	Most EOT claims fail because the contractor cannot prove cause, effect and critical path impact.
The Hidden Cost of Not Updating Your Programme	An outdated programme weakens reporting, recovery planning and entitlement.
When Should a Contractor Bring in Planning or Claims Support?	Early support is usually cheaper than trying to rebuild evidence at the end of the project.

Page 7 - Contact

Make it easy to enquire. Do not hide the email address. Keep the form practical and show response expectations.

Form fields	Name, Company, Role, Email, Phone, Project location, Project type, What do you need help with?, Message.
Support type dropdown	Programme update, Delay analysis, EOT claim, Reporting, Contract administration, Commercial support, Not sure yet.
Email	hello@[company].com or final business email.
CTA button	Send Enquiry.
Privacy note	We will only use your details to respond to your enquiry.

6. Visual mockups for each page

These mockups show the intended structure, page hierarchy, tone and content sequence. They are not final UI designs, but a designer/developer should use them as the build reference. Full-resolution PNGs are supplied separately in the ZIP file.

01 - Homepage Mockup

Desktop homepage structure. The hero should immediately state the service and value proposition, then move into pain, services, outcomes, founders, industries and CTA.

02 - Services Mockup

Service detail page showing four clear service categories and practical deliverables.

Full-resolution PNG is included in the mockups ZIP folder.

03 - Contractor Problems Mockup

Pain-led conversion page. This should feel like it understands contractor problems before selling services.

Book Intro Call

Common project problems we help contractors solve.

Most programme and claim issues become expensive because they are not tracked early enough. Build the evidence before it is too late.

We are delayed but cannot prove why.

What happens:
Delay events are discussed on site but not recorded or linked back to programme impact.

How we help:
Delay registers, event tracking, programme updates and critical path reviews.

Our EOT claim needs stronger support.

What happens:
The claim exists, but records, programme analysis and cause-effect narrative are weak.

How we help:
EOT support, delay analysis, chronology, supporting documentation and impact assessment.

Our programme is out of date.

What happens:
The baseline programme no longer reflects delivery and recovery actions are unclear.

How we help:
Programme updates, recovery programmes, lookahead planning and critical path analysis.

We do not have a full-time planner.

What happens:
PMs, CAs or site managers are trying to update programmes while delivering the job.

How we help:
Flexible remote planning support without permanent overhead.

We are exposed to liquidated damages.

What happens:
Delays are not linked to excusable events, creating risk at the end of the project.

How we help:
Delay tracking, EOT support, programme evidence and contemporaneous records.

Our reporting is not good enough.

What happens:
Clients and internal leadership want clearer reporting than the project team can produce.

How we help:
Progress dashboards, executive reports, S-curves, KPIs and monthly reporting.

If one of these sounds familiar, it is worth speaking to us

Book Intro Call

A specialist team focused on programme, entitlement and commercial outcomes.

Boutique support for contractors who need senior capability without full-time overhead.

Our work is practical, evidence-based and commercially focused. We help project teams maintain stronger programmes, better records and clearer reporting so they are better prepared when delays, variations and claims arise.

Taarish Punwani

Project Controls & Commercial Specialist

- Infrastructure project controls

- Forecasting and cost control

- Governance and executive reporting

- JV reporting and invoicing

- Power BI dashboards

- Commercial management

Vikum Perera

Project Controls, Commercial & Quantity Surveying Specialist

- 10+ years international experience

- Primavera P6 and planning

- Critical path analysis

- Delay analysis and EOT claims

- Quantity surveying

- Contract administration

How we work

Practical

Outputs project teams can actually use.

Commercial

Time, entitlement, cost and contract risk are always linked.

Responsive

Flexible support when contractors need capability quickly.

7. SEO, accessibility and performance checklist

SEO should support discovery for niche service searches, but the first version should prioritise credibility and conversion. Use semantic HTML headings, unique page titles, and service-specific copy.

Home	Project Controls, Planning & Claims Support Australia [Company Name]	project controls consultant Australia; construction planning consultant Australia
Services	Construction Planning, EOT Claims & Project Controls Services	construction planning, EOT claims support, project controls
Contractor Problems	EOT Claims, Delay Tracking & Programme Support for Contractors	EOT claims, delay tracking, programme support
Industries	Infrastructure, Rail, Utilities & Building Contractor Support	civil infrastructure project controls and claims support
About	About [Company Name] Project Controls & Claims Specialists	credibility and founder profiles
Contact	Contact [Company Name] Planning & Claims Support	contact / enquiry

Accessibility checklist:

- Use at least 17px body text on desktop and 16px on mobile.
- Meet WCAG AA colour contrast: 4.5:1 for normal text, 3:1 for large text.
- All images must include useful alt text.
- All forms must have visible labels.
- Keyboard navigation must work for menu, forms and CTAs.
- Do not rely on colour alone to communicate meaning.

Performance checklist:

- Compress all images to WebP/AVIF where possible.
- Lazy-load below-the-fold images.
- Avoid heavy animation libraries.
- Use a fast, reliable host and basic caching.
- Target mobile Lighthouse score above 90 after launch.

8. Content copy deck

Use this copy as the starting copy for the website. The developer can paste this directly into each page, then the designer can polish spacing and line breaks.

Home hero

Project Controls, Planning & Claims Support for Australian Contractors

We help civil, infrastructure and construction contractors maintain stronger programmes, track delays, protect EOT entitlement and improve commercial outcomes - without the cost of a full-time planner or claims team.

CTA: Book a 20-Minute Intro Call / Download Capability Statement

Pain statement

When project records are weak, contractors lose leverage.

Delays, variations and scope changes are part of construction. The problem is not always the delay itself - it is being unable to prove cause, effect, entitlement and impact when it matters.

Why contractors engage us

Built for contractors who need practical support, not more bureaucracy.

Protect entitlement. Reduce LD risk. Improve reporting. Access flexible senior support without full-time overhead.

About intro

We are a boutique project controls, planning and claims support consultancy built for contractors who need senior capability without full-time overhead. Our work is practical, evidence-based and commercially focused.

Contact intro

Whether you need programme support, delay analysis, EOT assistance, reporting or commercial administration, send us a short message and we will let you know how we can help.

9. Asset checklist and final handoff list

Items required before final build or before launch:

Company name	Use [Company Name] placeholder until final name is confirmed.
Logo	Temporary wordmark acceptable for draft. Final logo should be navy/white and work on light and dark backgrounds.
Headshots	Use professional headshots for Taarish and Vikum. If unavailable, use neutral placeholders initially.
Capability statement	Upload PDF and link from all key CTAs.
Contact email	Use a professional domain email such as hello@[company].com.
LinkedIn company page	Link in footer once created.
Images	Use licensed infrastructure/construction images only. Avoid fake-looking AI site photos.
Privacy wording	Add basic privacy note for forms and email capture.
Analytics	Install GA4 or equivalent plus conversion tracking for form submission and capability download.

Final developer deliverables:

- Responsive website built from the sitemap above.
- Editable CMS sections for services, insights and team profiles if possible.
- Downloadable capability statement CTA.
- Working contact form with email notification.
- SEO metadata on each page.
- Compressed images and performance pass.
- Mobile QA, browser QA and accessibility contrast check.

10. Research references

The recommendations in this brief are based on niche construction advisory examples and general B2B usability/accessibility principles. These are reference points only; the final website should remain original and specific to [Company Name].

Accura Consulting	Specialist claims, delay analysis, expert witness, planning/programming and commercial/contract management positioning.	https://www.accuraconsulting.com/
Rimkus - Project Controls	Project controls framed around risk, delay, cost overrun, conflicts and disputes.	https://rimkus.com/practice-area/project-controls/
HKA - Claims & Dispute Management	Claims and disputes can delay delivery, inflate costs and strain relationships.	https://www.hka.com/services/claims-dispute-management/
Linesight	Clean consulting navigation around services, sectors, projects, insights and contact.	https://www.linesight.com/
Nielsen Norman Group - Trustworthiness in Web Design	Trustworthiness supported by design quality, transparency, comprehensive/current content and connection points.	https://www.nngroup.com/articles/trustworthy-design/
WebAIM Contrast Checker	WCAG AA contrast guidance: 4.5:1 normal text and 3:1 large text.	https://webaim.org/resources/contrastchecker/
